

Your Home, Built Better

At Southeast Raleigh Promise, we believe stronger communities start with better homes. Your home should be a place where you feel comfortable, and at ease.

Here's what that means for you.

Lower Monthly Bills

Sealed tight, so the heated and cooled air you pay for stays inside instead of leaking out
High-performance heating and cooling that uses less energy for the same comfort
Sealed air ducts, tested to deliver 97% of the air to your rooms.
Water-saving faucets and toilets that lower your water bill without sacrificing performance

More Comfort, Controlled Temperature

Even insulation that wraps your living space like a thermal blanket, with no gaps or cold spots
Balanced airflow, so no room runs too hot or too cold even with the doors closed
A covered entrance that keeps you out of the rain while you find your keys

A Healthier, Fresher Home

A whole-house system brings in filtered fresh air all day, so the home never feels stale
Kitchen and bathroom fans pull steam, odors, and moisture outside before they cause damage

Safety, Peace of Mind

Hard-wired carbon monoxide detectors and a built-in vent system that keeps soil gases like radon out of your living space
Wall bracing is already built in, so grab bars can be added later without a major renovation

SystemVision for New Homes Program standards (2019), managed by Advance Energy, were used to inform design and construction.
